ONLY YOU CAN REDUCE YOUR RISK

WE KEEP IT REAL. YOU KEEP IT CLEAN.

The U.S. Centers for Disease Control and Prevention (CDC) “has found no evidence to suggest antimicrobial coatings offer any enhanced protection from the spread of bacteria and germs and that proper cleaning and handwashing are the best ways to prevent infection.”

Other interactive display companies may claim that their anti-microbial coatings protect you while using their displays. The truth is your greatest defense is regular cleaning and washing your hands after interactive use.

Each Newline display comes with an anti-bacterial screen cleaner that will keep your display bacteria germ free for up to 24 hours after each cleaning.

See our instructions on the next page for cleaning and disinfecting your display.

• Alcohol & ammonia free

THE IMPORTANCE OF CLEANING & DISINFECTING

REMOVE. REJECT. REFRESH.

There is a difference between cleaning and disinfecting a surface. Cleaning simply removes germs, dirt, and impurities from surfaces. Disinfecting kills the germs on a surface.

- Remove germs and dirt from your screen with our anti-bacterial screen cleaner.
- Reject the threat with an alcohol-based disinfectant.
- Refresh your screen for the next use.

FOLLOW THESE STEPS:

1. Power down your display and let cool.
2. Spray cleaner or warm water onto a microfiber or soft cloth. This will remove germs, dirt, and dust build up. Do not spray directly onto the screen.
3. Gently wipe the screen in circle motion until the screen is dry. Wax on, wax off!
4. Spray an alcohol-based disinfectant on a clean soft cloth.
5. Wax on, wax off again! Make sure the screen completely dries.
6. Don't forget to [wash your hands and the used cloths](#) when you're done.

PROTECT YOUR SCREEN. DON'T USE THESE ITEMS.

Ammonia

Coarse cloth or scrubber

Harsh soaps or chemicals

Bleach
